

The BC25GJFJV Series 300 μ m tight buffered fiber optical cable is made of Hytrel-7246 grade material, with a layer of Hytrel material extruded from a 200 / 250 μ m fiber to provide the ideal choice for high-density fiber optic cable.

Main Features

- Without shrinkage and deformation
- Provides excellent performance and flexibility at low temperatures and high impact resistance
- Chemical resistance
- Weather ability and aging resistance

Specification

Item	Parameter
Tight Buffered color	Natural (translucent), 12 colors
Tight buffer material	Dupont Hytrel-7246

Application

- High-density optical devices products
